## Percolation of hyperspheres

*Thursday, 14 December 2017 14:15 (60)*

A new method of studying the continuous percolation of aligned objects was recently proposed by Z. Koza and J. Poła in their article entitled "From discrete to continuous percolation in dimensions 3 to 7". Using this method authors were able to obtain results for percolations of hypercubes with far better accuracy than attained with any other method before. In my presentation I will describe aforementioned method and its application to percolation of hyperspheres in multidimensional systems.
